## **1. General solution**

### **1.1. Requirements**

### **1.2. Solutions**

Solution 1: RFID + Beacon

Solution 2: Line following using computer vision

## **2. Technologies**

### **2.1. Hardware**

#### **2.1.1. General configurations**

Solution 1: RFID + Beacon

Solution 2: Line following using computer vision

#### **2.1.2. RFID**

Definition

Working principle

#### **2.1.3. Bluetooth Low Energy**

Definition

Working principle

#### **2.1.4. Laser distance sensor**

Definition

Working principle

#### **2.1.5. Camera**

Definition

Working principle

#### **2.1.6. Battery changer station**

Definition

Working principle

## **2.2. Software**

### **2.2.1. Description**

### **2.2.2. Environment setup**

#### **AGV**

##### **Individual installation**

Raspberry Pi OS installation

Mosquitto MQTT installation

Firewall configuration

Running main control console application

##### **Docker installation**

Raspberry Pi OS installation

Running installation script

##### **Dashboard server**

Mosquitto MQTT installation

Firewall configuration

Nginx installation

Running installation script

##### **API server**

Firewall configuration

Nginx installation

Running installation script

## **MQTT broker**

Mosquitto installation

Firewall configuration

Creating topics

### **2.2.3. Frontend**

#### **AGV Integrated Display User Interface**

Login screen

Battery indicator

Delivery request creating menu

Delivery destination choosing menu

Confirmation screen

#### **Server Dashboard User Interface**

Control panel

Main data display panel

System panel

Working principle

Functions/Methods

### **2.2.4. Backend**

#### **AGV Backend**

Working principle

Functions/Methods

## **API Server**

API Endpoints

### **3. Operations explanation**

#### **3.1. Localizing method**

Solution 1: RFID + Beacon

Solution 2: Line following using computer vision

#### **3.2. Mapping method**

##### **Map structure**

Dimension

Layer

Cell

## **Synchronizing visual map with real AGV position**

Solution 1: RFID + Beacon

Solution 2: Line following using computer vision

### **3.3. Guiding method**

#### **Navigation methods**

##### **Navigation states**

Solution 1: RFID + Beacon

Solution 2: Line following using computer vision

### **3.4. Manual mode**

Controlling direction

Setting motor speed

Stopping emergency

Restarting AGV

### **3.5. Automated mode**

#### **Idle mode**

#### **Delivery mode**

Creating delivery request

Processing delivery request

Planning path

Identify other AGVs which are in delivering mode

Calculating departure timestamp

Starting transporting

Returning home

### **3.6. Initial configurations**

#### **Map initializing and setting**

Creating map

Setting map dimension

Identifying cell value

#### **Beacon scanner setting**

Scanning available around beacons

Reading beacon profile data

Assigning beacon name and coordinate to map

#### **Laser sensor setting**

Measuring distance

Setting avoiding distance

#### **Executing board checking**

### **4. Integration**

### **5. Testing**

### **6. Performance reviews**

### **7. Upgrading**

### **8. Updating**

### **9. Troubleshooting**
